Electrically Actuated Butterfly Valves

- The electric operated butterfly valves are small, lightweight, and compact in design but still offer high output torques.
- Electric actuators give a solid and prudent technique for working these valves from a remote area.
- This valve is suitable for both indoor and outdoor conditions.
- Electric Actuated Butterfly Valves permits the flow in one direction.

Bare Shaft Butterfly Valves

- The modular construction of this valve enables high demand in the market due to its metal circular disc.
- This is used as a pipeline in varied industries biz petroleum, chemicals, food, medicine, textile, paper making, hydroelectricity engineering, building, as well as light industry.
- Cast iron, ductile iron and carbon steel are the materials used to manufacture this valve

Iron Butterfly Valves

- The iron Butterfly Valve manufactured by us functions to stop or moderate air or item stream by methods for a turning disk.
- Our user friendly valve is made in compliance with the set industry norms with premium quality raw materials as per advanced technology.
- It posses unique features like high tensile strength, easy operation and compact design.
